Learning Spaces and Technology: the iBorrow project

The conference will look at the lessons and insights gained from the iBorrow Project. This partly JISC-funded project provides, within the new library and student support centre, 200 thin-client netbook devices available “as easily as picking a book from a shelf”.

Desktop virtualisation deployed across a wireless network within the large-scale learning space now provides rich management data supporting an enhanced understanding on how students, academic and support staff are reacting to the way that the new resources have been configured.

About Augustine House

Augustine House is Canterbury Christ Church University’s new ‘state of the art’ library and student services centre that has been developed to meet the needs of the University’s diverse student body at the beginning of the 21st century.

Who is the conference for?

This conference will be of interest to anyone involved in planning new libraries, learning centres or learning spaces; senior managers, computing staff, library and information specialists. It will also be of interest to academics and other professionals supporting information and communications technologies, e.g. student services managers, education developers and learning technologists.
