

Changes to previous information

During the global COVID-19 pandemic, we prioritised the health, wellbeing and safety of our students and staff.

As we start the new academic year, your health, wellbeing and safety remains our top priority. This means when we return to our campuses and buildings in September 2020 social distancing and other health and safety measures will be in place. This is to help keep you, and others around you, safe. We will respond to the requirements of vulnerable students regarding their personal safety on an individual basis.

We remain committed to delivering an outstanding education and student experience both on campus and online. Like most universities, we'll be providing a mix of on-site face-to-face and digital learning and teaching. The exact mix will vary between courses and course modules taking into account teaching requirements and other considerations such as meeting the safety of vulnerable staff.

It is important to emphasise that a face-to-face, on-site experience will be delivered within the Government and Public Health England guidance and providing there are no serious unforeseeable public health issues that result in the Government introducing further lockdown measures.

Our response to the pandemic means we may have made changes to your course. This is to take account of these important health and safety measures.

We ask you to read the information provided about course changes carefully. We detail what we include in our online prospectus and explain what has changed.

You should read our statement of changes alongside any information provided in videos, at open days or in other promotional materials. This is because the information may also have been affected by the changes we had to make. We are providing this information so you can make an informed choice about whether the course remains suitable for you.

When you register for your course, you will be asked to confirm you have read about our changes and you agree to them. It means that by choosing to continue with your application, and register with us, you accept these changes and are happy to study your course with us.

We really look forward to seeing you in the next academic year. In the meantime, if you want to find out more about University life from this September, and being part of our supportive and welcoming community, please visit our [September 2020 web pages](#).

Current published course related information		
Course title	Mechanical Engineering (Advanced Manufacture) with Foundation Year	
Award level	BEng – Single honours only	
How do you want to study?		
Start Date	Sept 2020	
Modes of study	Full-time	
Duration	4 years full-time	
UCAS code	H143	
Location	Canterbury	
Partner institution	N/A	
Available with a Foundation Year	N/A	
Overview		
	<p>Whether it's making the clothes on our backs or picking the crops from fields, mechanical engineering and advanced manufacturing is all around us.</p> <p>Our degree will prepare you for the challenges of this ever-evolving sector. You'll finish your degree with industry-ready skills and creativity to overcome the next generation of challenges. Designed and run in collaboration with business, and utilising the pioneering CDIO approach, this degree is rewarding and opens up real-world career pathways.</p> <p>Our foundation year option enables you to join the Mechanical Engineering (Advanced Manufacture) course even if you don't have the formal qualifications or experience to meet the entry requirements. It equips you with the knowledge to move into formal degree study, setting you up for future success.</p> <p>On completion of the course you'll be on track to become an Incorporated Engineer.</p>	

Why study Mechanical Engineering (Advanced Manufacture) with Foundation Year?

	<p>Mechanical (advanced manufacture) engineers design, develop, implement, and maintain advance manufacturing methods aimed at improving manufacturing industry and processes. This enables UK manufacturing to meet local and global market demands and provide cost effective, quality and timely manufacturing solutions for customers.</p> <p>Our hands-on course will prepare you to enter an engineering career with varied and exciting prospects. You'll study engineering and manufacturing to understand their role in production processes and you'll gain expertise in product creation processes from design to end manufacture.</p> <p>During the foundation year, you'll develop your engineering, science and computing knowledge and you'll gain skills to prepare you to study at degree level.</p> <p>There is a strong practical element to the course and you'll spend a significant amount of time in workshops and laboratories using your enquiring mind and demonstrating your technical skills and creativity.</p> <p>You'll use the pioneering CDIO (Conceive, Design, Implement, Operate) approach to problem solve mechanical engineering issues. The CDIO approach is an international engineering education model, developed by the Massachusetts Institute of Technology (MIT). It allows you to learn in a practical, hands-on way to find creative, evaluated solutions to industry related engineering challenges. We we are one of only a handful of universities in the UK to offer CDIO.</p> <p>Throughout the course you'll develop employability and job application skills to help you apply for placement opportunities that could open the door to your future career and/or prepare you for further studies.</p> <p>Wherever the course leads you, you'll be</p>	<p>Mechanical (advanced manufacture) engineers design, develop, implement, and maintain advance manufacturing methods aimed at improving manufacturing industry and processes. This enables UK manufacturing to meet local and global market demands and provide cost effective, quality and timely manufacturing solutions for customers.</p> <p>The course learning is adhering to World Health Organisation (WHO) and UK GOV Coronavirus guidance to ensure a safe learning and working environment during COVID19 endemic. The course will consist of a blend of on and off campus practical learning in engineering and science laboratories and off-campus on-line theoretical and practical learning. The off-campus hands on practical learning are being designed to use resources provided or common household items so we can support your learning in your home. The on and off campus and on-line practical learning are being designed to help you develop practical skills, also an enquiring mind and demonstrating your technical skills and creativity.</p> <p>On-line learning will be provided by virtual learning environment Blackboard and appropriate specialist software tools that support certain module areas, for example computer aided design using Fusion 360</p> <p>Read Less</p> <p>The on and off campus practical elements of the course will prepare you to enter an engineering career with varied and exciting prospects. A proportion of group-work activities will be on-line developing your skills for working world COVID19 endemic.</p>
--	--	--

	<p>equipped with the professional and technical skills you need to work as an industry-ready engineer.</p>	<p>You'll work on individual and group projects supported with on-line tools akin to current professional engineering working activities and Personal Academic Tutor. You will be supported by academic teaching team on and off campus and on-line at timetabled sessions.</p> <p>You'll study engineering and manufacturing to understand their role in production processes and you'll gain expertise in product creation processes from design to end manufacture.</p> <p>During the foundation year, you'll develop your engineering, science and computing knowledge and you'll gain skills to prepare you to study at degree level.</p> <p>You'll use the pioneering CDIO (Conceive, Design, Implement, Operate) approach to problem solve mechanical engineering issues. --	--	--

<p>Entry requirements</p>	<p>Entry requirements are typically 32-112 UCAS points including minimum 5 GCSEs (including maths, English language and science). However, students who have typically:</p> <p>32-88 UCAS points at Level 3 and studied at least one of the following: A level maths, A level physics, A level applied science, A level engineering, BTEC Engineering Diploma.</p> <p>88-112 UCAS points at Level 3 and who have not studied: A level maths, A level physics, A level applied science, A level engineering, BTEC Engineering Diploma.</p> <p>32-112 UCAS points at Level 3 in maths, science or engineering and who have not been in full-time/part-time education for many years.</p> <p>Further entry requirements 5 GCSEs grade C/4 or above (including maths, English, science) Science can be physics, chemistry, biology or computer science</p> <p>The course will provide you with further science and maths knowledge and understanding that underpins mechanical engineering. It will help you develop your higher education learning skills in science and maths to support your further pursuit of studying a MEng/BEng (Hons) in Mechanical Engineering (Advanced Manufacture).</p> <p>This course is also available as a BEng or MEng.</p> <p>More information about entry requirements.</p>	
<p>About the course</p>		
<p>Years 0-3</p>	<p>The foundation year will give you study skills and foundations of engineering that you need to start Year 1 of the degree. You'll learn about general engineering science, physics, chemistry, computer programming and maths, and you'll develop higher education study skills.</p> <p>As you progress through the degree, you'll learn about professional practical engineering and you'll study engineering design and engineering science. You'll then</p>	<p>The foundation year will give you study skills and foundations of engineering that you need to start Year 1 of the degree. You'll learn about general engineering science, physics, chemistry, computer programming and maths, and you'll develop higher education study skills.</p> <p>As you progress through the degree, you'll learn about professional practical engineering and you'll study</p>

	<p>go on to explore mechanical engineering in more depth and you'll study modules that are specific to manufacturing engineering, such as manufacturing control, instrumentation and communication, and design and analysis for automated manufacture.</p> <p>All through the course, you'll experience plenty of hands-on learning through active learning laboratories, engineering laboratories and the use of engineering workshops and makerspace. You will undertake small group projects, typically sourced from industry. You'll also develop skills enabling you to:</p> <p>work effectively and supportively in diverse and inclusive groups communicate effectively in groups and one to one apply project management to group-work apply principles of commercial management and consideration of wider issues.</p> <p>Each year you'll undertake a large group project. These projects, which are typically sourced from industry, will help you to develop your learning in engineering business, practice and project management.</p> <p>In year 1, you'll have the opportunity to develop your knowledge and understanding and some application. As you progress to year 2, you'll apply your knowledge and understanding to conceive, design, build and operate a solution to a problem. In your third year, you will undertake an individual research and development project that will inform the group project and help you to develop and illustrate the ability to critically analyse the application of your knowledge and understanding to solve an engineering problem.</p> <p>You'll also have the opportunity to undertake a work placement and gain valuable experience working alongside industry experts.</p>	<p>engineering design and engineering science. Module information

- Please note that the list of optional modules and their availability may be subject to change. We continually review and where appropriate, revise the range of modules on offer to reflect changes in the subject and ensure the best student experience. Modules will vary when studied in combination with another subject.

Foundation year

	<p>Fundamentals of Engineering Core module - (0 Credits)</p> <p>You'll learn about the principles of engineering, including engineering science and key concepts that guide engineers in the 21st Century.</p>	
	<p>General Engineering Science Skills Core module - (0 Credits)</p> <p>You'll develop basic transferable skills in scientific reasoning, scientific investigations and the communication of scientific ideas and outcomes. This will enable you be a more effective engineer when communicating your ideas to non-engineers.</p>	
	<p>Mathematics for Engineers Core module - (0 Credits)</p> <p>This module will develop the mathematical skills that are relevant to engineering to enable you to apply relevant mathematics to solve and model engineering problems.</p>	
	<p>Fundamentals of Physics Core module - (0 Credits)</p> <p>This module introduces the basic underpinning physics concepts relevant to engineering, supporting your aspirations of</p>	

	becoming an engineer.	
	<p>Fundamentals of Computer Programming Core module - (0 Credits)</p> <p>You will study the fundamental principles of computer programming that support the development of mechanical systems.</p>	
	<p>Fundamentals of Physical Chemistry for Engineers Core module - (0 Credits)</p> <p>You'll learn about fundamental physical chemical concepts and you'll develop your material engineering understanding and practice.</p>	<p>Fundamentals of Materials Core module - (0 Credits)</p> <p>Fundamentals of Physical Chemistry for Engineers has been updated to the Fundamentals of Materials. This module will help you to understand which materials are more suitable for a particular product/task. You will cover expected performance of materials as well as the impact of environmental conditions.</p>
Core year 1		
	<p>Professional Practical Engineering (with Mechatronics Project) Core module - (40 Credits)</p> <p>In this module, you learn about applying mechanical related engineering, engineering evaluation, concept generation, design, prototype and testing to a real problem (typically sourced from industry).</p>	
	<p>Mathematics, Computing and Physics for Mechanical Engineers Core module - (20 Credits)</p> <p>You'll develop your confidence in applying the fundamental science (laws of physics), mathematics, statistics principles and computing skills in engineering contexts.</p>	<p>Mathematics and Computing for Engineers Core module - (20 Credits)</p> <p>Mathematics, Computing and Physics for Mechanical Engineers has been updated to the Mathematics and Computing for Engineers. The Physics content has been added to the Introduction to Electro-Mechanical Systems and Practice module. These changes will balance the content in the modules and enhance your learning experience. Mathematics and Computing for Engineers module will focus on developing your confidence in applying mathematics and statistics principles, and computing skills in context to engineering, ensuring you</p>

		have the mathematical and digital skills for your engineering ambitions.
	<p>Introduction to Engineering Design Core module - (20 Credits)</p> <p>You will learn through practical experience of creating and translating engineering drawings. You will practice by hand and on a computer in a group design project, developing similar habits and minds as commercial engineers.</p>	
	<p>Introduction to Elec/Mechanical Systems and Practice Core module - (20 Credits)</p> <p>You will gain experience of electronic, electrical and mechanical principles, methods and practice used in commercial engineering components. You will also develop engineering practical workshop skills to manufacture and fabricate engineering products.</p>	<p>Introduction to Electro-Mechanical Systems and Practice Core module - (20 Credits)</p> <p>Introduction to Elec/Mechanical Systems and Practice has been updated to the Introduction to Electro-Mechanical Systems and Practice. You will gain the opportunity to learn the fundamentals of laws of physics, electronic, electrical and mechanical principles, methods and practice used in commercial engineering components. You will also develop engineering practical workshop skills to manufacture and fabricate engineering products.</p>
	<p>Introduction to Material Engineering Characteristics & Manufacture Core module - (20 Credits)</p> <p>This module introduces you to materials used in engineering, specifically metals, plastics, ceramics and composites and material mechanical properties to enable you to select appropriate materials for future products or tasks.</p>	
Optional year 1		
	N/A	
Core year 2		
	<p>Engineering Product Lifecycle Core module - (40 Credits)</p> <p>You will gain experience of developing products in context to product life-cycle from raw materials to end of life, and take</p>	

	into consideration the wider social, environmental, commercial and financial issues and your role as an engineer.	
	<p>Computer Aided Engineering and Design Core module - (20 Credits)</p> <p>You will learn Computer Aided Design (CAD) tools and design processes for designing, sizing and developing products and parts akin to a commercial engineer.</p>	
	<p>Dynamics of Solid Mechanics and Materials Core module - (20 Credits)</p> <p>You will strengthen your knowledge and understanding of materials, solid mechanics and dynamics applied to material selection.</p>	
	<p>Dynamics of Fluid and Thermal Systems Core module - (20 Credits)</p> <p>You will develop your knowledge and understanding of thermodynamics and fluid mechanics as applied to mechanical engineering type of applications, like district heating system.</p>	
	<p>Control, Instrumentation, and Communication Systems in an Industrial Environment Core module - (20 Credits)</p> <p>You will gain technology insights and applications of communication, control and instrumentation for an industrial environment, for example oven temperatures, automated pickers.</p>	
Optional year 2		
	N/A	
Core year 3		
	<p>Professional Mechanical Engineering Project Core module - (40 Credits)</p> <p>You will gain experience of working individually and as part of a team to design and develop a solution to a complex mechanical engineering problem giving you a real sense of the work an engineer in industry would do.</p>	
	<p>FEA for Mechanics and Materials Core module - (20 Credits)</p> <p>You will apply, critically analyse and</p>	

	interpret the fundamental principles of advanced stress analysis and computational mechanical dynamics finite element analysis of products to evaluate if products in principle are fit for purpose, prior to prototyping.	
	<p>CFD for Thermal and Fluid Dynamic Modelling Core module - (20 Credits)</p> <p>You will learn to model and analyse industrial fluid flow and heat transfer systems like a biofuel plant.</p>	
	<p>Industry 4.0 for Manufacturer Core module - (20 Credits)</p> <p>You will investigate and critically analyse industry 4.0 technology ad solutions for the manufacturing industry.</p>	
	<p>Design and Analysis for Automated Manufacture Core module - (20 Credits)</p> <p>You will learn how to design creative, considered, sustainable, ethical, economical, inclusive complex manufacturing engineering solutions. You will also cover automated component separation systems.</p>	
Optional year 3		
	N/A	

How you'll learn

Teaching

You will be taught through a combination of lectures, seminars, tutorials, laboratory work and workshops.

Seminars and tutorials in smaller groups will enable you to discuss and develop your understanding of topics covered in lectures. In addition, you will meet with your academic personal tutor and will spend a significant amount of time gaining hands-on experience in the computing and engineering laboratories.

In each academic year you will complete a team CDIO project (typically sourced from industry) in a 40 credit module. These large group projects provide you with the opportunity to reflect on your knowledge and understanding in context to a real-world scenario and develop your confidence in your mechanical and product engineering understanding and knowledge.

Additional drop-in academic and peer learning mentoring sessions will be typically timetabled and you will be encouraged to make use of and support these sessions to develop your learning.

We will also nurture your transferable skills so you can:

- work effectively in diverse and inclusive groups
- communicate effectively in groups and one-to-one
- apply project management to group-work
- apply principles of commercial management and solutions considerations
- develop effective communication with professionals from other disciplines, especially clinicians
- contribute to industry through your solutions

The course learning is adhering to [World Health Organisation \(WHO\)](#) and [UK GOV Coronavirus guidance](#) to ensure a safe learning and working environment during COVID19 endemic. The course will consist of blend of on and off campus practical learning in engineering and science laboratories and off-campus on-line theoretical and practical learning. The off-campus hands on practical learning are being designed to use resources provided or common household items so we can support your learning in your home. The on and off campus and on-line practical learning are being designed to help you develop practical skills, also an enquiring mind and demonstrating your technical skills and creativity.

On-line learning will be provided by virtual learning environment Blackboard and appropriate specialist software tools that support certain module areas, for example computer aided design using Fusion 360

Each module will have face to face on campus learning and off campus on-line learning. Each 20-credit module typically involves the following amount of contact time:

Foundation Year (Year 0) - 60 hours

Year 1 - 60 hours

Year 2 - 50 hours

Year 3 - 40 hours

The modules are led by a team of engineering lecturers, senior lecturers and principal lecturers. Laboratory work is also supported by technicians and postgraduate demonstrators.

Each year you will complete a team CDIO project (typically sourced from

	<ul style="list-style-type: none"> • provide tangible results for your portfolio of evidence for future employment. <p>All courses are informed by the University's Learning and Teaching Strategy 2015-2022.</p>	<p>industry) in a 40-credit module. These large group projects provide you with the opportunity to reflect on and apply your knowledge and understanding to a real-world scenario while building your confidence so you can:</p> <p>Work effectively and supportively in diverse and inclusive groups. Communicate effectively in groups and one-to-ones. Apply project management to group-work. Apply principles of commercial management and solutions considerations. Develop effective communication with professionals from other disciplines, especially clinicians. Contribute to industry through your solutions. Provide tangible results for your portfolio of evidence for future employment. You'll also benefit from drop-in academic and peer learning mentoring sessions.</p> <p>All programmes are informed by the University's Learning and Teaching Strategy 2015-2022.</p>
--	--	---

<p>Independent study</p>	<p>When not attending lectures, seminars, tutorials, workshops or other timetabled sessions you will continue learning through self-study. Typically, this involves reading books and articles from academic journals, undertaking research in the library, and preparing for coursework assignments/examinations and seminars.</p> <p>Your module tutor will direct you towards specific readings and/or activities to complete before class.</p>	<p>When not attending lectures, seminars, tutorials, workshops or other timetabled sessions you will continue learning through self-study. Also includes yourself study time; module preparation, module learning contextualisation, assessment research, development and submission of assessments, and examination revision.</p>

	<p>Typical contact time per week:</p> <ul style="list-style-type: none">• Year 1 15 hours• Year 2 12.5 hours• Year 3 10 hours	
--	---	--

Academic input	<p>The modules are led by our engineering academic team consisting of lecturers, senior lecturers and principal lecturers. Laboratory learning is further supported by senior and junior technicians and postgraduate demonstrators.</p>	
How you'll be assessed		
Years 0-3	<p>All academic years consist of a mix of modules that are assessed by coursework only, to modules that are assessed by examination and coursework. Examinations may be open-book or closed book exams. Coursework may include, Engineering log book, Technical drawings, Wiki pages, blogs, pitches to industry, posters, leaflets, engineering manual, etc.</p> <p>The foundation year (Year 0) consists of 6 non-credit bearing modules.</p> <p>Years 1-3 (Levels 4-6) consist of 4 modules that are 20 credits each and 1 module that is 40 credits.</p> <p>In the modules and module assessment you will need to demonstrate:</p> <p>Knowledge and understanding of engineering science and principles engineering at Level 4; Application of knowledge and understanding of Mechanical Engineering at Level 5; Critical analysis of application of knowledge and understanding of Mechanical Engineering at Level 6.</p> <p>The 40 credit modules will provide you with the opportunity to work on a substantial group CDIO (Create, Design, Implement and Operate) project typically sourced from industry. These projects will provide you with the opportunity to build your technical skills, as well as your professional practice skills. The pioneering CDIO approach is being designed to enable you to develop your creative skills to find solutions based on engineering science, principles and provide practical benefits to end users, and manufacturers.</p> <p>The Level 6 Professional Mechanical</p>	<p>In addition to previous information Examinations maybe open-book, closed book style exam, on-line, or 24hr take home exam.</p>

	<p>Engineering Project 40 credits module will entail group and individual project. The overall group project will be typically sourced from industry, and will require a number of individual projects to support a solution to the overall group project. Each individual project will entail dissertation assessment. Each group will be led and managed by a Level 7 MEng student studying the Professional Engineering Project and Management module. Each Level 7 student will research, develop, apply and test through the development of their own evaluation methods to critically analyse a more complex problem that contributes to the Level 6 Professional Product Engineering group. Each Level 6 and 7 individual projects within the group project will entail a dissertation.</p> <p>Level 7 students will be responsible to lead and manage integration of all the project solutions to provide an integrated system, and verifying and validation that the solutions are timely, cost effective and are the desired quality, in addition to meeting IS standards, current and anticipated future regulations and public policy, ethical considerations, patents, health and safety.</p>
