

# International Projects and Research: South Africa

## Partnerships

Working in partnership with the University of Johannesburg Radiography Department our virtual student exchange pilot has been enthusiastically received by students. This supports widening access and offers students an international experience when they cannot visit another part of the UK or another country in person.

The virtual student exchange provides opportunity for students to: build radiography knowledge through discussion with colleagues; enhance their understanding of how different health care systems work; and learn different approaches that can influence their own practice.

## Consultancy

We are also working in consultation with the University of Johannesburg with their Radiography Clinical Reporting initiative. Our extensive experience in delivering a Masters in Clinical Reporting is a unique resource.
